

ARM Instructions Worksheet #9

Floating-Point Compares

And their effect on the NZCV Flags in the CPSR register:

| 31 | 30 | 29 | 28 | 27 | 26 | ... |
|----|----|----|----|----|----|-----|
| N | Z | C | V | Q | | |

Prerequisite Reading: Chapter 9

Revised: April 21, 2020

Objectives: To use the web-based simulator ("CPULator") to better understand ...

1. The use of VCMPL and VMRS to perform floating-point comparisons.
2. The use of VSUB and VMOV to simplify some floating-point comparisons.
3. The use of floating-point equality comparisons.

To do offline: Answer the questions that follow the listing below. (Numbers at far left are memory addresses.)

```

                                .syntax      unified
                                .global       _start

// *** EXECUTION STARTS HERE ***

00000000  _start:    MOVS      R0,#0           // N flag = 0
00000004          VLDR      S0,posPt4      // S0 = +0.4
00000008          VLDR      S1,posPt5      // S1 = +0.5
0000000C          VCMPL.F32  S0,S1         // 0.4 < 0.5 ?
00000010          VMRS      APSR_nzcv,FPSCR
00000014          LDR       R0,#1          // Assume MI
00000018          BMI      L1
0000001C          LDR       R0,#0          // Wasn't MI

00000020  L1:      VSUB.F32  S2,S0,S1      // S2 = 0.4 - 0.5
00000024          VMOV      R1,S2
00000028          LSR       R1,R1,31       // Same as R0?

0000002C          VLDR      S3,negPt1      // S3 = -0.1
00000030          VCMPL.F32  S2,S3         // S2 == S3 ?
00000034          VMRS      APSR_nczv,FPSCR
00000038          LDR       R2,#1          // Assume EQ
0000003C          BEQ      done
00000040          LDR       R2,#0          // Wasn't EQ

00000044  done:    B        done           // Infinite loop

00000048  point5:  .float    +0.5
0000004C  point4:  .float    +0.4
00000050  point1:  .float    -0.1

                                .end

```

What is in the N flag (CPSR bit 31) after executing the VCMPI at address 0000000C₁₆?

| | | | |
|--------------------------|-------------------------------------|-------------------------------------|-------------------------------------|
| N | C | Z | V |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |

What is in the N flag (CPSR bit 31) after executing the VMRS at address 00000010₁₆?

| | | | |
|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|
| N | C | Z | V |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |

What is in register R0 *before* executing the VSUB instruction at address 00000020₁₆?

R0 (as decimal signed)

What is in register S2 after executing the VSUB instruction at address 00000020₁₆?

S2 (as decimal signed)

What is in register R1 after executing the VMOV instruction at address 00000024₁₆?

R1 (as hexadecimal)

What is in register R1 after executing the LSR instruction at address 00000028₁₆?

R1 (as decimal signed)

What is in register S3 after executing the VLDR instruction at address 0000002C₁₆?

R2 (as decimal signed)

What is in the Z flag (CPSR bit 29) after executing the VMRS at address 00000034₁₆?

| | | | |
|-------------------------------------|-------------------------------------|--------------------------|-------------------------------------|
| N | C | Z | V |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

What is in register R2 *before* executing the B instruction at address 00000044₁₆?

R2 (as decimal signed)

Getting ready: Now use the simulator to collect the following information and compare to your earlier answers.

1. Click [here](#) to open a browser for the ARM instruction simulator with pre-loaded code.

Note: You can change the number format in the “Settings” window between hex, unsigned decimal and signed decimal as needed

Step 1: Press F2 once per ARM instruction as needed to see what the simulator says for the following:

What is in the N flag (CPSR bit 31) after executing the VCMPI at address 0000000C₁₆?

| | | | |
|--------------------------|-------------------------------------|-------------------------------------|-------------------------------------|
| N | C | Z | V |
| <input type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |

What is in the N flag (CPSR bit 31) after executing the VMRS at address 00000010₁₆?

| | | | |
|-------------------------------------|-------------------------------------|-------------------------------------|-------------------------------------|
| N | C | Z | V |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |

What is in register R0 *before* executing the VSUB instruction at address 00000020₁₆?

R0 (as decimal signed)

What is in register S2 after executing the VSUB instruction at address 00000020₁₆?

S2 (as decimal signed)

What is in register R1 after executing the VMOV instruction at address 00000024₁₆?

R1 (as hexadecimal)

What is in register R1 after executing the LSR instruction at address 00000028₁₆?

R1 (as decimal signed)

What is in register S3 after executing the VLDR instruction at address 0000002C₁₆?

R2 (as decimal signed)

What is in the Z flag (CPSR bit 29) after executing the VMRS at address 00000034₁₆?

| | | | |
|-------------------------------------|-------------------------------------|--------------------------|-------------------------------------|
| N | C | Z | V |
| <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |

What is in register R2 *before* executing the B instruction at address 00000044₁₆?

R2 (as decimal signed)
